v.net.salesman has the **sequence** parameter to show the optimal route to visit nodes on a vector network

https://grass.osgeo.org/grass76/manuals/v.net.salesman.html

In QGIS 2.x, this parameter was treated as an OutputTable:

https://github.com/qgis/QGIS/blob/release-2_18/python/plugins/processing/algs/grass7/description/v.net.salesman.txt#L13

Now in QGIS 3.4, sequence is treated as a QgsProcessingParameterFileDestination, in html:

https://github.com/qgis/QGIS/blob/master/python/plugins/processing/algs/grass7/description/v.net.salesman.txt#L13

For this, sequence should be redirected as stdout

https://github.com/qgis/QGIS/blob/master/python/plugins/processing/algs/grass7/Grass7Algorithm.py#L632

but the grass_batch_job.cmd generated by v.net.salesman does not show the **sequence** parameter

```
chcp 1252>NUL
g.proj -c proj4=+proj=tmerc +lat_0=39.68258333333333 +lon_0=-8.133108333333334 +k=1 +x_0=0 +y_=0 +ellps=GRS80 +towgs84=0,0,0,0,0,0,0 +units=m +no_defs"

v.in.ogr min_area=0.0001 snap=-1.0 input="D:\SIG\dados_exercicio_analise_redes\dados_exercicio\rede_viaria_distrito_porto_break.shp" output="vector_5c52dd7e6b0492" --overwrite -o

v.in.ogr min_area=0.0001 snap=1.0 input="D:\SIG\dados_exercicio_analise_redes\dados_exercicio\campanha_museus_distrito_porto.shp" output="vector_5c52dd7e6b0493" --overwrite -o

v.db.connect -o map=net5c52dd7e6b0493 table=vector_5c52dd7e6b0493 layer=2
v.net.salesman input=net5c52dd7e6b0493 arc_type="line,boundary" center_cats="1-100000" arc_column=tmpo_duplo arc_backward_column=tmpo_unico output=output5fa55aa089254a3ba02e31092108c33a > "C:/Users/pedro.venancio/AppData/Local/Temp/processing_4b126eadd2664406b36071e98ff7f6d79/d5fa58be43584452874031b51f74031b95114617/output.gpkg" format="GPKG" layer=1 --overwrite exit
```

2022-01-12
and the report.html file is empty.

The correct command should be

```bash
v.net.salesman input=net5c52dd7e6bbf84 arc_type="line,boundary" center_cats="1-100000" arc_column=tmpo_duplo arc_backward_column=tmpo_unico output=output5fa55aa089254a3ba02e31092108c33a sequence=- > "C:/Users/pedro.venancio/AppData/Roaming/QGIS/QGIS3/profiles/default/processing/outputs/report.html" --overwrite
```

The same happens with `v.net.report` and `v.net.nreport`.

So, the `sequence=-` parameter needs to be passed to `grass_batch_job.cmd`.

Tested only in Windows, by now.

[processing] fix broken stdout handling in GRASS algs (fix #21142)

(cherry picked from commit b9f559ee0430e09d8e1a3b70e060155635080262)

---

**History**

**#1 - 2019-01-31 01:00 PM - Giovanni Manghi**

- Regression? changed from No to Yes

**#2 - 2019-01-31 02:55 PM - Alexander Bruy**

- Assignee set to Alexander Bruy
- Status changed from Open to In Progress
- Pull Request or Patch supplied changed from No to Yes

Fix included in #21142. BTW, this is more general issue and also happened with other algorithms which output results to HTML.

**#3 - 2019-02-01 07:02 AM - Alexander Bruy**

- % Done changed from 0 to 100
- Status changed from In Progress to Closed

Applied in changeset commit:qgis|b9f559ee0430e09d8e1a3b70e060155635080262.

**#4 - 2019-02-01 07:14 AM - Alexander Bruy**

- Resolution set to fixed/implemented
