Easy fix?:	No	
Description		
<p>When opening/importing a KML layer (or other via OGR), would be super helpful to include as one of the fields the OGR_STYLE (i.e. styleURL in KML).</p> <p>Would help maintaining feature-specific styling where different features in the same layer have different styles in the source file, since then can use Categorized symbology on the imported layer.</p> <p>Can work around by manually converting the kml using commandline, e.g. ogr2ogr -f GPKG -sql "select *,OGR_STYLE from FolderName", but it's an unnecessary hassle esp. if you have to do it for each folder.</p> <p>Thanks for a great product!</p>
