

QGIS Application - Bug report #21182

GRASS 7.4.4 & QGIS 3.4.4

2019-02-06 08:44 AM - Edward Stevenson

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	Unknown	
Affected QGIS version:	3.7(master)	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 29000
Description		
<p>Futher to my report yesterday, it appears that the attributes table for my contours layer created from a USGS file 30n030w_20101117_gmtd_mea075 has ID & elevation data. However, try to create a GRASS layer of the contours via the grass module (-file management-Import into GRASS-Import vector into GRASS-Import loaded Vector) the attributes table of the new grass contours layer only has cat data.</p> <p>I Don't understand how I am losing this data, is it a bug or do i have the wrong procecedure?</p>		

History

I am using GRASS for this as when I was trying to export the contours as a DXF file I would lose the elevation data when I imported the DXF into AutoCAD/ Covadis?

#2 - 2019-02-06 08:50 AM - Edward Stevenson

Do you know if QGIS and Covadis are compatible? Covadis is a Geomaedia software basically the french equivalent to AutoCAD's Civil 3D
