

QGIS Application - Bug report #21185

Vertex Editor Tool - Vertex List not working properly

2019-02-06 05:04 PM - Felipe Souza

Status: Closed	
Priority: High	
Assignee:	
Category: Digitising	
Affected QGIS version: 3.4.4	Regression?: Yes
Operating System: Windows 10	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: no timely feedback
Crashes QGIS or corrupts data: No	Copied to github as #: 29003
Description	
<p>When using the Vertex Editor tool, and selecting one of the vertex, we can't see which one of them are selected in the Vertex table list. It's important to highlight which of the vertex is selected, so you can check if the coordinates are ok. QGIS 2.18 used to have that working properly.</p>	

History

#1 - 2019-02-06 05:45 PM - Saber Razmjooei

- Status changed from Open to Feedback

With the latest changes, this issue should be addressed:

<https://github.com/qgis/QGIS/pull/9087>

It will hopefully be backported to the next LTR release.

#2 - 2019-02-07 11:21 AM - Giovanni Manghi

- Category changed from Editing to Digitising

#3 - 2019-02-25 04:15 PM - Steve Lowman

This is still broken in 3.4.5 and 3.6.

It should be 'Yes' for regression.

#4 - 2019-02-25 08:59 PM - Giovanni Manghi

- Regression? changed from No to Yes

- Priority changed from Normal to High

This is still broken in 3.4.5 and 3.6.

It should be 'Yes' for regression.

have you tested master?

#5 - 2019-03-17 09:25 AM - Giovanni Manghi

- Status changed from *Feedback* to *Closed*

- Resolution set to *no timely feedback*

Closing for lack of feedback (works here on recent installers). Please reopen if necessary.

#6 - 2019-03-18 12:53 PM - Steve Lowman

Okay, thanks. I tested the 3.4.5 nightly build on my local PC, and it is fixed. Then I did the same test on the LTR 3.4.5, where it was still broken before, and now it works, so somehow, it seems like installing the 3.4.5 nightly build also incidentally fixed the proper LTR, even though there should have been no change to that installation.

We mainly work on a Citrix application, where it is still broken, and I cannot ask our IT support to install the nightly build on there, so I will report back after they upgrade there to 3.4.6 when it is released.

#7 - 2019-04-04 12:18 PM - Steve Lowman

I can report that in our Citrix QGIS 3.4.6 application, this is now fixed, but there is still a lesser bug where the vertices of a feature remain highlighted as large red dots even after the Vertex Editor panel is closed or a different tool selected. The best work-around is to close the panel and then use the Vertex Tool to right-click another feature in the same layer. This removes the vertex highlighting and re-opens the Vertex Editor panel, which can then be closed again, but it is not an intuitive procedure.

I will test other instances of the application and seek other bug reports for this highlighting problem, but this #21185 report can remain closed as it is resolved.
