Having a set of points with a 'code' attribute consisting of a 2-char code+5digits I wanted to select all dutch points (starting with NL).

Reading substr(string,start[,length]) I tried:

eg: code = "NL1234"

substring("code", 0, 2) => 'NL'
then I thought to start on position 1 so did
substring("code", 1, 2) => 'NL'
I actually started questioning because I started of with
substring("code", 0, 3) => 'NL' thinking it was from-till
then tried
substring("code", 0, 2) and also came to 'NL'

So there are three ways to find the first 2 chars :-(

Isn't this confusing? Should an expression not either be zero-based or one-based?

We could argue that expressions are not for devs/coders so we deliberately choose for 1-based. But I think then we should put that in the Help text (so peeps like me should not try zero) and using zero then should work.

But personally I would just prefer zero-based...Mmm, testing LibreOffice here, I see that using a zero as start actually returns an error)... 

So this is actually a feature?

fix substr help (fixes #21192)

(cherry picked from commit 2bed7ab0018696dba76d2c8053d22633a271486e)
Not reproducable here:

\[
\begin{align*}
\text{substr('NL1234',0,2)} & \Rightarrow 'NL' \\
\text{substr('NL1234',1,2)} & \Rightarrow 'NL' \\
\text{substr('NL1234',0,3)} & \Rightarrow 'NL1'
\end{align*}
\]

Mmm, strange. So the last example I cannot reproduce here either. But my point that it is not clear if it is zero based or one based is still valid:

\[
\begin{align*}
\text{substr('NL1234',0,2)} & \Rightarrow 'NL' \\
\text{substr('NL1234',1,2)} & \Rightarrow 'NL'
\end{align*}
\]

But we could consider this a ‘feature’...
Problem would have been bigger if the second parameter would have been the end-stop instead of the length....

Close?

The help doesn’t say where the indexes start - but the examples show the current behavior (ie. index start at 1 - like in postgresql for instance; postgresql however produces an empty string on substring('NL1234',0,1) and 'N' on substring('NL1234',0,2)). Except

\[
\text{substr('HELLO WORLD',6)} \Rightarrow 'WORLD'
\]
