

QGIS Application - Bug report #21203

'j' keyboard (alt-gr + '+' ) not working on QGis 3.4.4 with Spanish or Italian keyboard - Windows

2019-02-08 12:55 PM - Javier Becerra Elcinto

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	GUI	
Affected QGIS version:	3.4.4	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 29021
Description		
<p>Running QGis 3.4.4, in a Windows 8.1 setup in Spanish, with Spanish es-es keyboard (Qwerty with '[' being alt-gr+'[' and ']' alt-gr+'+'), I can properly type '[' (alt-gr+'[') but nothing happens when I try to type ']' (alt-gr+'+').</p> <p>This happens in Python Console (quite annoying actually), on Python Console's text editor or when changing a layer's name (right-click on the layer tree view on bottom left of the screen), but it works properly on dialogs shown in independent windows (i.e. open file dialog/save as...).</p>

Running QGis 3.4.4, in a Windows 8.1 setup in Spanish, with Spanish es-es keyboard

It also happens with **QGIS 3.4 and master** (3.5 7f3640d8a1) on Windows 7 64 bit using an **Italian keyboard**.

This happens in Python Console (quite annoying actually), on Python Console's text editor or when changing a layer's name

and in the **"feature attributes pop-up window"** (the window that appears after a new feature is created) too.

It seems the problem is that in the main QGIS window the **shortcut "Ctrl+Alt++"** is assigned to the **"Zoom in" tool** and that **"AltGr" key is emulated by "Ctrl+Alt"** key combination (at least on Windows).

So, for keyboards in which "j" = "AltGr++", like Spanish and Italian ones, the "Zoom in" tool is selected instead of typing the "j" character when "AltGr++" key combination is pressed.

You can "set to none" (or to another key combination) the shortcut of the "Zoom in" tool (from Settings | Keyboard Shortcuts...) as a workaround.

Thanks Andrea!

I can confirm that removing 'Zoom In' ('Configuración'->'Atajos de teclado...->'Acercar zoom' in Spanish version) keyboard shortcut gets the ']' symbol back!
