

QGIS Application - Feature request #21206

Consistent layer naming between Export > Save Features As to geopackage and other ways to add geopackage layers

2019-02-08 01:58 PM - Steve Lowman

Status:	Open	Resolution: Copied to github as #: 29024
Priority:	Normal	
Assignee:		
Category:	Map Legend	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>Case 1: When you Export > Save Features As from an existing layer into a geopackage layer and check the Add to layers box, then the layer name is like <geopackage_name ><layername>.</p> <p>Case 2: When you use Browser or Data Source Manager to 'create a new layer or table', or to add an existing geopackage layer into the Layers, or use the New Geopackage Layer dialog, then the newly added layer name is just <layername>, and you do not get the geopackage name prefixing it.</p> <p>Please could the layer naming be consistent. Although I prefer the Case 1 outcome, I expect it may be a lot easier to make Case 1 behave the same as Case 2.</p>

Just to add for information, I have been working in QGIS 3.4.2 so far, and I think this request is really for a correction that should be implemented in the LTR. Thanks.
