

QGIS Application - Bug report #21210

GDAL python tools are broken in QGIS 3.4.4/master

2019-02-08 03:45 PM - Giovanni Manghi

Status: Closed	
Priority: High	
Assignee:	
Category: Windows Package	
Affected QGIS version: 3.5(master)	Regression?: Yes
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 29028
Description	
for example gdal_merge	
GDAL command:	
cmd.exe /C gdal_merge.bat -ot Float32 -of GTiff -o	
C:/Users/qgis/AppData/Local/Temp/processing_7c972bb45de649dba703b37af8e39225/a14f75dc2cc3467ea263dfff8f94899e/OUTPUT.tif --optfile C:/Users/qgis/AppData/Local/Temp/processing_7c972bb45de649dba703b37af8e39225\mergeInputFiles.txt	
GDAL command output:	
'gdal_merge.bat' is not recognized as an internal or external command,

I can confirm on Windows with master/3.4, but errors are a slightly different. 3.4 complains about missed gdal_merge.bat, while in master it can not find gdal_merge.py

confirmed here the slightly different message.

So this is an osgeo4w packaging issue, right? Not qgis?

probably, but I'm afraid that at this point filing this bug only in the osgeo4w bug tracker will pass unnoticed and we will ship a new release with such important tools broken.

Does gdal_merge.bat exist in %OSGEO4W_ROOT%\bin? Should have been created by etc/postinstall/gdal-python.bat (which runs bin/make-bat-for-py.bat) after gdal-python was installed.

Oh, well. Findings so far: 3.4 runs the batch files which only gdal-python (GDAL Py2 bindings) provides - but it's didn't depend on it, because QGIS

normally uses python3 - hence the batch files calls fail. It starts working once that is installed (and a dependency was added).

master was changed to run the scripts directly with python3 (see #20870). That only helps if the scripts are in the current working directory - but that usually

is %OSGEO4W_ROOT%\bin, which also happens to be where gdal-python puts the scripts - intended for py2, but not any different from those for py3. So with gdal-python scripts installed it should work there too - often.

My expectation was, that python would look in PATH or PYTHONPATH for script files - apparently not happening.
