

QGIS Application - Feature request #21228
Make it so styles saved for the layer in a geopackage equal styles in the 'Style Manager' list of the Layer Styling panel.

2019-02-11 02:08 PM - Steve Lowman

Easy fix?:	No	
Description		
<p>It would make a more consistent user experience if the layers listed in the 'Style Manager' list of the Layer Styling panel, which are the same as those you see in Layers Panel > Right-click > Styles, would match up exactly with the styles saved for the layer in the geopackage.</p> <p>Perhaps the logical structure for this may be difficult to design, but the benefits could be substantial for user experience. Already, when you click 'Save as Default' in the Layer Styling/Style Manager, you get the option to save this default to the Datasource Database, so I am suggesting this connection between Style Manager and the Database should be the only option, and that it should be extended to all the saved styles, not just the default.</p> <p>(I have chosen 'Unknown' for "Category", as there is not an obvious named category, but please apply another category if appropriate.)</p>
