<b>Easy fix?:</b> No	<b>Copied to github as #:</b> 12184
<b>Description</b>	
<p>I would like to see a way to label multiple values.</p> <p>Here is my proposal:</p> <p>If there is a list view that contains the list of attributes and a text edit box that contains a layout of the label, a user can double click on one of the attribute and that attribute name (e.g. quad_name ) would show up in the layout text edit box in brackets (e.g. [quad_name] ). Other attributes can be added by repeating the above steps and new lines can be added by entering CTRL-Enter. It would be great if html can be used in the layout text edit box!</p>
