

QGIS Application - Feature request #21286

[Expression]Add shortcut for (multiple) lines commenting when writing expressions

2019-02-15 02:52 PM - Harrissou Santanna

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	Expressions	
Pull Request or Patch supplied:	No	Resolution: wontfix
Easy fix?:	No	Copied to github as #: 29104
Description <p>I often play with expression functions and while looking for the best expression, I sometimes need to comment parts of the code being written in order to test the behavior of the rest or ignore it (and save it for later). This needs to be done by adding '--' to all the lines I want to hide and again remove those characters later if I want to enable some lines. A bit not handy...</p> <p>It could be nice to allow selection of multiple lines and pressing either a key or from the contextual window allow to apply "Comment" or "Uncomment" functions.</p>

You can always use the multiline comment style:

```
/*
  select * from ....
  blah
  more
*/
```

Good to know. Thanks Nyal.

#3 - 2019-02-20 11:45 AM - Nyal Dawson

- Resolution set to wontfix

- Status changed from Open to Feedback

So can we close this?

#4 - 2019-02-20 04:16 PM - Harrissou Santanna

I'm not really sure. Now that I know there's no need to comment each line one by one, my workflow is sped up but the request was also about a shortcut, ie I select the text or the rows and press some keys (or a button?) and they are (un)commented, like you can do on most of text editors.
