

QGIS Application - Bug report #21296

Regressions in processing "Tile Index" tool

2019-02-18 02:08 AM - Alister Hood

Status: Closed	
Priority: High	
Assignee: Nyall Dawson	
Category: Processing/GDAL	
Affected QGIS version: 3.4.4	Regression?: Yes
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied: No	Resolution:
Crashes QGIS or corrupts data: No	Copied to github as #: 29114

Description

Issue 1:

The processing "Tile Index" tool in QGIS 3.x is equivalent to the one in 2.x. However, "Raster>Miscellaneous>Tile Index..." now uses the processing tool, whereas in 2.x series it was a separate implementation, which must have somehow run the gdalindex command in a different way, because it could handle more files.

I have 151 rasters here with 88 character long paths.

In both 2.x and 3.x the processing tool produces the error "The command line is too long."

But the tool in the 2.x menu runs perfectly, even though the command it displays is significantly longer (for two reasons - it tries to use the .aux.xml files in the input directory, as well as the tif files, and it also uses \\ in each path for all except the last directory separator, rather than /). So, whatever method that tool was using to run the command, it was superior (also note that the whole point of this tool is that you have a LOT of rasters - I don't think 151 is an unreasonably high number).

This could be considered a regression, because the old gdaltools tool which supported more input files has been superseded by the processing tool.

This testing is under Windows, and I doubt this issue would occur on a real operating system.

Issue 2:

If I only select a small number of rasters, the processing tool succeeds in 2.x, but not in 3.x. This is because the path to each raster includes a space, and 3.x is not separately quoting the path to each raster, it is putting one set of quotes around the entire list of input files.

These are the error messages (I have replaced the list of paths, obviously):

```
****  
ERROR 4: Entire/list of/paths: No such file or directory  
  
Unable to open Entire/list of/paths, skipping.  
****
```

This problem is a regression by any definition, and I'm guessing it is not specific to Windows, but I haven't checked.
