QGIS Application - Bug report #21356
Processing - Export to PostgreSQL (available connections)

2019-02-23 01:02 PM - Rocco Pispico

Status:	Open		
Priority:	Normal		
Assignee:	Giovanni Manghi		
Category:	Processing/GDAL		
Affected QGIS version:	3.4.4	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:		**Copied to github as #:**	29174

Description

This script has several problems especially when use *iterate over...*

- doesn't create multiple layers but only a single layer, if overwrite is checked remain only the last feature;
- if the source layer is a postgres layer, the name of new one layer is a concatenation of <new schema>.<source schema>.<table name> instead of <new schema>.<table name>;
- if the source is postgres doesn't check if source layer and new layer are the same.

I think that the names of output layers could be created in a *composer* in order to have maximum flexibility.

Finally two cosmetic wish:

- the counter goes from 0 to number of feature instead from 1 to number of feature;
- change the iterator icon is in a checkbox widget.

History

#1 - 2019-02-23 01:27 PM - Giovanni Manghi

- Operating System deleted (W10 and ubuntu)

- Assignee deleted (Alessandro Pasotti)

- Category changed from Processing/QGIS to Processing/GDAL

Please, 1 issue per ticket (and a meaningful subject).

#2 - 2019-02-23 01:27 PM - Giovanni Manghi

- Assignee set to Giovanni Manghi
