QGIS Application - Bug report #21358
Grass 7 broken in QGIS 2.18 Mac
2019-02-23 05:39 PM - MRick -

Status:	Closed			
Priority:	Normal			
Assignee:	William Kyngesburye			
Category:	GRASS			
Affected QGIS version:	3.4.0	**Regression?:**	Yes	
Operating System:	Mac	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	invalid	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	29176	

Description

QGIS 2.18.19-2 is the latest version packaged with Grass 7. For any reasons, All the following versions been have packaged with Grass 6 only. But the tools are unusable with this version because they are compatible with version 7 only…
I get an error message saying Grass 7 hasn't been installed correctly.

I tried to copy grass7 components from QGIS 2.18.19-2 into my 2.18.28 version, but it doesn't to work… QGIS won't see Grass 7 at all. I am needing to revert to version 2.18.19-2.

In the readme files it's never mentioned such a regression.

History

#1 - 2019-02-23 05:40 PM - MRick -

Bug is affected to QGIS version 3.4.0 because it's impossible to select lower versions.

#2 - 2019-02-23 08:42 PM - Jürgen Fischer

- Resolution set to invalid

- Status changed from Open to Closed

2.18 is EOL.

Excuse-me, but QGIS 2.18 is still heavily used in companies. QGIS 3.4 is still very buggy and incompatible with a lot of plug-ins not upgraded.
QGIS 2.18 is more stable.
