Category:	Map Legend		
Affected QGIS version:	3.7(master)	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:		**Copied to github as #:**	29319

Description

... unless using an expression..

add a point layer with a column with value between 1 and 100

enable the data defined size controlled by the assistant

set the "value from/to" from 1 to 100, but the "size from/to" from 1 to 10 > size of points will be between 0 and 10

enable the "data defined size legend", size of symols will be between 1 and 100, resulting in huge (not usable) symbols in legend

Does only apply to the "separated legend items" option.
