

QGIS Application - Bug report #21505

Raster Symbology, Paletted/Unique values not respecting selected band

2019-03-07 01:51 AM - Andrew Harvey

Status: Closed	
Priority: Normal	
Assignee:	
Category: Symbology	
Affected QGIS version: 3.6.0	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 29322
Description	
<p>I have a 4 band raster loaded into QGIS, under the layer Symbology I've chosen "Paletted/Unique values" and selected Band 3 to be the source of those values. Selecting classify with random colors, all the vales are represented correctly, however the actual raster is rendered based on Band 1, not based on the selected Band 3. I would expect selecting band 3 could cause it to use band 3 in the rendering.</p>

History

#1 - 2019-03-07 01:55 AM - Andrew Harvey

My workaround is to use `gdal_translate -b3` to pull out band 3 into a 1 band image and use that in QGIS.
