<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b> duplicate
<b>Easy fix?:</b> No	<b>Copied to github as #:</b> 29356
<b>Description</b>	
<p>I work as a geologist and use Qgis for my base maps and it would be immensely useful if I could create cross-sections in Qgis, especially with 3D topography.</p> <p>Mapinfo has this ability and it is used extensively in the Mining and Exploration industries.</p> <p>Being able to create vertical sections on northings, eastings or a section lines would be a great addition to Qgis, another program with this ability is the free mining software Recmin but it is Spanish and the English versions leave a bit to be desired.</p>
