Can you add more details? what are the steps needed to replicate the problem?

Hi Giovanni,

It is a strange situation.

I just open QGIS and open the file browser (layer administrator). When searching for a layer to load, the program closes. I have tried to install and uninstall the versions and go with the 3. * I haven't the same problem with 2.18 in the same computer.

I have tried on another computer, also with W10 and I do not have that problem, I can to load shapefiles, geopackages

Thanks, Emilio

I have tried on another computer, also with W10 and I do not have that problem, I can to load shapefiles, geopackages

Thanks, Emilio

have you tried with a new/clean profile (no 3rd party plugins installed)?

Does it happens only for folders with specific datasources? or any folder?
