

QGIS Application - Bug report #2160

"on the fly" reprojection distorts calculated polygon area

2009-11-28 11:05 AM - belg4mit -

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: Projection Support	
Affected QGIS version:	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied:	Resolution: wontfix
Crashes QGIS or corrupts data:	Copied to github as #: 12220

Description

Even though the queried layer and project projections were the same (EPSG 2894), QGIS consistently reported a calculated area that was 1/10th of the actual area if automatic reprojection was enabled (so that other layers were drawn correctly).

History

#1 - 2009-11-28 11:09 AM - Giovanni Manghi

- Resolution set to wontfix
- Status changed from Open to Closed

Hi,

if you are using 1.0.2, please update to 1.3 (or trunk) as there were major bug fixes in the projection/measurement section since the version you are using.

If even with 1.3/trunk you will experience problems than please post a sample of your data in order to make further tests.
