

QGIS Application - Feature request #21601

Rotate vector polygon feature by specified vertex

2019-03-17 01:18 PM - Uri Meir

Status: Closed	
Priority: Normal	
Assignee:	
Category: Digitising	
Pull Request or Patch supplied:	Resolution:
Easy fix?: No	Copied to github as #: 29417
Description	
Hi, I think it would be very helpful if it would be possible to rotate a polygon (or line) feature by a specified vertex. It seems that currently the only option is to rotate the feature around its centroid.

It seems that currently the only option is to rotate the feature around its centroid.

Not that true: you can use another point using the Ctrl button as mentioned in the doc:

https://docs.qgis.org/testing/en/docs/user_manual/working_with_vector/editing_geometry_attributes.html#rotate-feature-s

The missing feature is the snapping part as already reported in #19106

Hi Harrissou,

You are completely right! I missed that in the docs.

two comments:

- 1.Using this "ctrl rotate" feature made my QGIS crash a few times (QGIS 3.4.5, Debian Stretch).
- 2.Snapping to nodes in the feature will indeed make it much more useful, I'll be following #19106.

1.Using this "ctrl rotate" feature made my QGIS crash a few times (QGIS 3.4.5, Debian Stretch).

I think I also got a crash at some moment while pressing the key too much. If you get this consistently, consider opening an issue report with appropriate details, please.

| 2.Snapping to nodes in the feature will indeed make it much more useful, I'll be following #19106.

OK, so could we close this report?

Yes, I guess we can close it, thanks for the reference!
