Description

On Windows 7 64 bit with QGIS 3.4.5-1 LTR (commit:89ee6f6e23) and QGIS 3.7.0-10 Master (commit:1205fbfa71),

the **"Create attribute index"** (qgis:createattributeindex), **"Random selection within subsets"** (qgis:randomselectionwithinsubsets) and **"Select by attribute"** (qgis:selectbyattribute) processing algorithms raise the following unnecessary error on dialog window opening if there is no vector layer in the map:

    WARNING   : Could not load selected layer/table. Dependent field could not be populated

It seems the warning was introduced with PR https://github.com/qgis/QGIS/pull/8967
