QGIS Application - Bug report #21649
Add features in WFS-T layer with snapping indexing issue

2019-03-21 09:28 PM - João Gaspar

Status:	Open			
Priority:	Normal			
Assignee:				
Category:	Web Services clients/WFS			
Affected QGIS version:	3.6.0	**Regression?:**	No	
Operating System:	Windows 7 64-bits	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**		
Crashes QGIS or corrupts data:		**Copied to github as #:**	29465	

Description

Steps to reproduce:

Load a WFS layer with edition permissions.

Activate snapping for the layer and try to add a new feature. (In my case, Polygon). The index data appears and stops.

Notes:

- If we go to the profile user in the cache folder, QGIS creates the PID number folder of the process qgis and inside of folder start to write a SQLite database for the cache. I don't know if this is related to the option of index data dialog. I'm testing in a new wfs layer without features with spatial index.

- The WFS layer is from a local QGIS Server 2.18.22 project with a PostGIS connection.

Related with this issue:

https://gis.stackexchange.com/questions/213132/how-can-i-solve-the-problem-with-the-indexing-data-window-while-editing

This happens in 3.6.0 and 3.4.5

Without snapping works fine.

- Status changed from Open to Feedback

Did it worked as expected on qgis desktop 2.18?

#2 - 2019-03-21 09:35 PM - João Gaspar

No, is the same behavior as well.
