

QGIS Application - Bug report #21665

Virtual layers are always stored with absolute paths

2019-03-24 11:19 PM - Martin Dobias

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	Virtual Layers	
Affected QGIS version:	3.7(master)	Regression?: No
Operating System:	any	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 29481
Description		
<p>Paths to data sources of virtual layers always use full paths when stored in projects (and full paths are expected when reading project files). This makes projects with virtual layers using file-based sources non-portable between different machines.</p> <p>Steps to reproduce:</p> <ol style="list-style-type: none">1. create a virtual layer with a shapefile as a source2. store as a project3. move the project and shapefile to a new directory -> virtual layers is invalid <p>There are QgsVectorLayer::encodedSource() and QgsVectorLayer::decodedSource() methods that will need adjusting.</p>
