

QGIS Application - Bug report #21697

QGIS Server: GetFeatureInfo Requests impossible on layer groups or top layer

2019-03-29 08:58 AM - Andreas Neumann

Status:	Closed	
Priority:	High	
Assignee:	Alessandro Pasotti	
Category:	QGIS Server	
Affected QGIS version:	3.7(master)	Regression?: Yes
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 29513
Description		
<p>In QGIS Server 2 the QGIS server exposed LAYER groups as well as the top level as 'queryable="1"'. In QGIS Server 2 one could also submit a LAYER group or the TOP level as LAYER in the GetFeatureInfo request. I think this was fine according to the standards, as layer groups and top levels are also LAYERS. In QGIS Server 3 both don't work anymore: - LAYER groups and top level LAYER elements do not include the queryable="1" - even if the user/machine provides a top level or group LAYER in the GetFeatureInfo request, QGIS server does not respond to such queries</p>

Revision 9a689aff - 2019-04-04 11:47 AM - Alessandro Pasotti

[server] Allow WMS GetFeatureInfo on root layer and groups

If the group (or the root) has any queryable child, it is flagged as queryable

Also fixes an issue with json encoding with rasters.

Here is one QGIS server (3.6) WMS service:

<https://services.geo.zg.ch/ows/Gewaessernetz?SERVICE=WMS&REQUEST=GetCapabilities> to illustrate the issue.

- Status changed from Open to In Progress

Digging into this now, the issues is triggered by a DD expression on the symbol size based on map scale, which is of course not available in getlegendgraphics calls because there is no map and no canvas.

I need to think about what would be the best approach in this case.
