

QGIS Application - Bug report #21729

Reprojection not working on Mapinfo tabfiles

2019-04-02 10:14 AM - Mie Winstrup

<b>Status:</b>	Feedback	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Category:</b>	Vectors	
<b>Affected QGIS version:</b>	3.4.5	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 29544
<b>Description</b>		
<p>I have a mapinfo-tab file in coordinate system EPSG:3044. I want to reproject it to EPSG:25832, and keep it as a mapinfo-file.</p> <p>I have tried various ways to reproject the file to the new coordinate system, among other the 'Reproject Layer'-tool where I select Tab-files as the output format.</p> <p>The tool runs without any problem, but the coordinatsystem in the new reprojected layer is the still EPSG 3044 - and not EPSG25832.</p> <p>It works fine if I reproject to a shapefile.</p> <p>The same happens in the export-function from the layer properties.</p> <p>I have attached two screenshots and the tab-file</p>		

History

#1 - 2019-04-02 01:25 PM - Giovanni Manghi

- Operating System deleted (Windows)
- Status changed from Open to Feedback
- Category changed from Processing/QGIS to Vectors

The same thing happens when using ogr2ogr, i.e.

ogr2ogr -f "MapInfo File" output1.tab Pointdata.tab -s\_srs EPSG:3044 -t\_srs EPSG:3857

so it is unlikely to be a QGIS bug.

so it is unlikely to be a QGIS bug.

Okay, then I should probably report the issue to ogr2ogr, and close this issue?

I would say yes, but let's see if a developer has something to say.
