# QGIS Application - Bug report #21746 SAGA OpenCV Image Analysis

2019-04-03 01:14 PM - Nikola Kranjčić

Status: Feedback
Priority: Normal

Assignee:

Category: Processing/SAGA

Affected QGIS version: 3.4.6 Regression?: No Operating System: Windows 10 Easy fix?: No

Pull Request or Patch shipplied: Resolution:

Crashes QGIS or corrupts data: Copied to github as #: 29561

#### Description

During SAGA Image analysis all of modules based on OpenCV don't work with the same output - Error select a library. I can see that this is the common issue, but couldn't manage to solve it.

I have tried installing QGIS on Windows 7, Windows 10, Ubuntu 18 (64 bit). I have tried it on QGIS 3.0, 3.4 and 3.6 - installed as standalone and via Osgeo - the result is the same.

Is there any way to solve it?

what do you mean with the above?

I made a quick and dirt test, and the tools here seems to work (Ubuntu and qgis 3.6.1).

When trying to perform image classication there is always an error regarding use of right library (openCV functions). Simmilar to this error mentioned - <a href="https://issues.qgis.org/issues/19540">https://issues.qgis.org/issues/19540</a>

What could be the issue, or next steps?

Kind regards,

Nikola Kranjčić

there are several image classification tools, can you specify one? It also be useful if you can attach a minimal project+data we can use to test.

I am trying some of the machine learning modules, for example, Artificial Neural Network. I am attaching one satellite image via link and one shapefile with test samples in it.

unsure about the results (you din't attached the training areas), but the tool works here.

Please provide a test data and step-by-step instructions how to reproduce the issue. Also please report which SAGA version do you use.
