

QGIS Application - Bug report #21771

map freezes after add via "Add PostGIS Layers"

2019-04-04 06:50 PM - Navid Taheri

Status:	Feedback	
Priority:	Normal	
Assignee:		
Category:	Vectors	
Affected QGIS version:	3.4.6	Regression?: No
Operating System:	LMDE 3 (Debian 9)	Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 29586
Description		
<p>I add my ESRI shapefile layers via "Add PostGIS Layers" but when they add completely I tried zoom in and zoom out on my add files but it seems they were locked our freeze I'd been able do any zoom after that when I did choose one layer in Layers Panel I could do zoom in/out normally.</p>		

History

#1 - 2019-04-06 12:04 PM - Giovanni Manghi

- Subject changed from layers freeze after add via "Add PostGIS Layers" to map freezex after add via "Add PostGIS Layers"
- Status changed from Open to Feedback

You sure you imported the data in PostGIS with the correct CRS?

Can you attach a postgresql dump of your data?

#2 - 2019-04-06 07:17 PM - Navid Taheri

- Assignee set to Giovanni Manghi
- File pg_dump.zip added
- Status changed from Feedback to Open

Yes I am sure I checked coordinate for many a time

I uploaded whole my pg_dump folder in zip file, please check it, if you see it is not enough or it is not correct file please let me know.

I'm sorry there isn't anything usable in the zip file you attached. Is that a postgres dump/backup made with pg_dump?

No problem whatsoever here (see attached image), you probably need to look for a local issue. Try with a new/clean qgis profile.

Thank you so much, you think it relate to my system configuration or my qgis config?
Ok, bunch a thank I'll check my qgis setting again.
