- Subject changed from qgis crash when filtering a layer with an attachment field to qgis crash when filtering a layer with an attachment field
- Status changed from Open to Feedback
- Priority changed from Normal to High
- Crashes QGIS or corrupts data changed from No to Yes

duplicate/related to #19118 ?

#2 - 2019-04-06 12:01 PM - Giovanni Manghi

what are the exact steps to replicate?
to repeat the crash:
1) Have a layer of any geometry with such characteristics for at least one field:
   - widget type - attachment
     integrated document viewer (Type: web page)
2) Start filtering in the attribute table for any field

      - widget type - attachment
        integrated document viewer (Type: web page)
   2) Start filtering in the attribute table for any field

Cannot replicate here, can you please attach a project with data? thanks.

- Description updated

Sergii Brazhynenko added:

- File test.zip added

In the attached archive, project, gpkg-file, and a small video clip.
Thanks

Giovanni Manghi wrote:

- Status changed from Feedback to Open
- Operating System deleted (Ms windows 10)

Confirmed also on Linux:

QGIS died on signal 11.
Could not attach to process. If your uid matches the uid of the target process, check the setting of /proc/sys/kernel/yama/ptrace_scope, or try again as the root user. For more details, see /etc/sysctl.d/10-ptrace.conf
ptrace: Operation not permitted.
No thread selected
No stack.
gdb returned 0
Aborted (core dumped)
- Regression? changed from No to Yes

Sorry I couldn't make it, apparently the bug is inside QtWebKit (upstream), I'm attaching a valgrind snapshot with the invalid write.

this also means that the attachment widget is (from a user point of view) completely "broken"? https://issues.qgis.org/issues/19118
