<b>Description</b>	
I'm trying to paste a few features into a postgresql layer that has two attributes that together form the table's primary key. The values of the attributes are not pasted correctly, although both name and order and type match.

Can you please detail the precise steps to replicate (also the sql used to create the table and the PK with the a attributes), thanks!

##### #2 - 2019-04-10 05:55 PM - Sebastian Brocks

Here's the sql for the table:

```
CREATE TABLE public.nullpunkt(  
  nummer integer NOT NULL,  
  bezeichnung varchar(1) NOT NULL,  
  geometrie geometry(POINT, 4326),  
  CONSTRAINT nullpunkt_pk PRIMARY KEY (nummer,bezeichnung)  
);
```

I have a temporary scratch layer with a few point features with two attributes, one integer of length 10, and one string of length 1.

When I try to paste point features into the nullpunkt layer, the attribute values are not pasted correctly. for the first two features that are pasted, the number is correct, the other features don't have the correct number. the string is incorrect for all.

I have a temporary scratch layer with a few point features with two attributes, one integer of length 10, and one string of length 1.

do they have the same name as the postgis table?

##### #4 - 2019-04-11 09:12 AM - Sebastian Brocks

Yes they do

**#5 - 2019-04-11 09:15 AM - Sebastian Brocks**

- File *paste\_error.png* added

See the attached picture: "Pasted" contains the features I want to copy into "nullpunkt". What you see in nullpunkt is the result of pasting the features that are selected in "Pasted" into "nullpunkt"
