Hello.

First of all, QGIS 2 has no such problem! All fine.

For QGis 3+ versions on the same computers:

If there are several elements (Text, Polygons) on the layout (even without Map) all manipulations with elements and zooming layout become very slow. Sometimes it leads to crash.

I can't replicate this here, would you mind attaching a sample project+data?

The situation is aggravated if the security program (SecretNet, if this is important) is running on the computer. Zooming of layout can take up to 10+ seconds.

in the same time the main window works without any complaints and problems.

The main question is how and why a security program can affect the layout so much. I can't migrate to Qgis 3 :(

you should raise this question in the qgis developers mailing list.

#2 - 2019-04-12 05:04 PM - Evgeniy Z

- File with `_secretnet_move.gif` added
- File with `_secretnet.gif` added
- File without `_secretnet.gif` added

Sorry, I misled you. It was one of the oldest computers. In general it works regarding normal.

I recorded three gifs for demonstration.

Please, Look gif "`without_secretnet.gif`". It works normal.

But it works not normal when SecretNet is installed.

import of layout takes more than 30 seconds, zooming slower.

Look "`with_secretnet.gif`".

And changing position becomes difficult - file "`with_secretnet_move.gif`"

Could you help with this question, please? I don't understand what you mean.

Notice that rendering is quickly both in the main window and in the layout.

so if this is isolated to an old computer means we can close this ticket?

if you want/need a wider discussion about an issue the developers/users mailing lists are better suited.
