

QGIS Application - Feature request #21878

Concave hull (alpha shapes) should allow creating separate hulls for each value of a user-selected field

2019-04-17 09:07 PM - Johannes Kroeger

Status:	Open	Resolution: Copied to github as #: 29693
Priority:	Normal	
Assignee:		
Category:	Processing/QGIS	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
Concave hull (alpha shapes) and Concave hull (k-nearest neighbor) should allow creating separate hulls for each value of a user-selected field.		
The Minimum bounding geometry supports this (as do many others).		
See also #21749 for the same request for the Convex hull tool.		

History

#1 - 2019-04-17 09:08 PM - Johannes Kroeger

- Subject changed from Concave hull tools should support per-field-value hulls to Concave hull (alpha shapes) should allow creating separate hulls for each value of a user-selected field

Oops, missed that Concave hull (k-nearest neighbor) supports it too. I can only update the title, sorry about the wrong info in the main body.
