

QGIS Application - Bug report #21894

Selected sub-item of Join doesn't count for editing

2019-04-21 12:59 PM - Jonathan Moules

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	GUI	
Affected QGIS version:	3.4.3	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 29709
Description		
<p>On the Joins Page (layer properties), I've created a join. Several things:</p> <p>a) Double clicking on the join brings up join info dialog. Pressing cancel closes the info but then expands the join info. Double clicking the title again does the same again (dialog, cancel = un-expand). It should Only bring up the dialog, not affect the expanded/shrunk-ness.</p> <p>b) It's not possible to double-click any of the children (when expanded) to bring up the dialog.</p> <p>c) Selecting any of the children and then clicking "edit" or "remove" doesn't do anything. Only selecting the title seems to affect these buttons.</p>
