## Description

Hi, I'd like to report a recurring bug which is ongoing in the last several editions of QGIS 3.x.

At random moments, during normal usage of QGIS, such as using the Processing toolbox to use the Polygonize feature, or simply during usage of some Geometry or Geoprocessing tools (Dissolve, Simplify, Merge...), the program just freezes on its own. I would gladly provide some logs, but since this isn't a crash (the crash window doesn't pop up, the program just freezes and I have to kill it manually), I don't know how to extract them.

## History

**#1 - 2019-04-30 06:28 PM - Giovanni Manghi**

*- Priority changed from Normal to High*

*- Category changed from Map Tools to Unknown*

*- Subject changed from QGIS keeps to QGIS freezes*

Please try with a new/clean QGIS profile (no 3rd party plugins installed).

If it persist then please attach a sample project with data and detailed steps on how replicate.
