Pull Request or Patch supplied:		**Resolution:**	duplicate
Easy fix?:	No	**Copied to github as #:**	12255

Description

I saw that DXF2SHP plugin doesn't import any informations of the imported features from the dxf file i.e.: layer color, thikness,... that should be very useful for a better usability. The only field relulting in the dbf table of a converted dxf-shapefile is "Myid" that is filled witha sequential number.
It should be very important to be able to classify imported features at least by "Layer" field.
