

QGIS Application - Bug report #21994

Print layout legend "feature count" shows feature count for entire layer when "filter legend by map content" is on

2019-05-03 05:15 PM - Carolyn Krause

Status:	Open	
Priority:	Normal

Category:	Map Composer/Printing	
Affected QGIS version:	3.6.1	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 29809
Description		
<p>In the print layout, a legend has the option to display a "feature count" for a layer. This option displays the total number of features in that layer, as expected. However, the option, "filter legend by map content," has no effect on the "feature count." I would expect the "filter legend by map content" option to reduce the "feature count" to <i>count only the features within the map extent</i>.</p> <p>For example, if a layer has 10 features, but only 5 are visible on the map. I would expect "feature count" to display [10] when "filter legend by map content" is off. I would expect the "feature count" to change to [5] when "filter legend by map content" is turned on.</p> <p>I'm posting this as a bug report because I think the feature doesn't work as would be reasonably expected. If others disagree, please make this a feature request instead. It would be very useful to automatically display a count of features visible on the map.</p> <p>There are screenshots of this issue on GIS Stackexchange: https://gis.stackexchange.com/questions/321578/how-to-show-feature-count-for-layout-extent</p>

I agree with your assessment of expected behavior vs actual.
