qgis crashed in the background while I was using Firefox. I had one shapefile open, one non-permanent output and one WMS. I recently made a fresh install of qgis with purging all profiles, so this should somewhat be a clean install, I only have one plugin installed by now.

**Report Details**

**Crash ID:** 7d29924f4829425ab791f7ff594e8177cc850b2c

**Stack Trace**

- QMapDataBase::freeNodeAndRebalance :
- QgsAuthMethodRegistry::operator= :
- QMetaObject::activate :
- QThread::finished :
- QThread::currentThreadId :
- QThread::start :
- BaseThreadInitThunk :
- RtlUserThreadStart :

**QGIS Info**

- QGIS Version: 3.6.3-Noosa
- QGIS code revision: commit:0c5774c068
- Compiled against Qt: 5.11.2
- Running against Qt: 5.11.2
- Compiled against GDAL: 2.4.1
- Running against GDAL: 2.4.1

**System Info**

- CPU Type: x86_64
- Kernel Type: winnt
- Kernel Version: 6.1.7601

**History**

  no, this was the first time I had this crash

so very hard to replicate/say what could be the cause.
