Crashes QGIS or corrupts data:	No	Copied to github as #: 12358
Description		
<p>When opening a raster, the default is now vrt, not the most common file format around; the window does not remember last user's choice, which is even more annoying. Tiff looks a more reasonable default</p>

I believe it is a linux only problem, if I'm not wrong under windows tiff is the default.

under windows the program uses the last used format when the dialog is open. On linux the dialog opens always with vrt... pretty annoying.

This seems the same issue of the "Save As" feature.
The QFileDialog doesn't change the selected filter value when user switches between filters.

If it's right, this could be an issue only on Gnome.
Does anybody have the same problem on KDE?

Yes, the same problem on KDE. Native QFileDialogs reject the last filter value and select the first options. Non-native QFileDialogs work fine (e.g. Raster->Contour->Input raster). Seems like Qt bug. There was idea of allowing users to choose between native and non-native QFileDialogs.

Apparently solved in master, at least on Gnome 3. Please reopen if still true in some DE.
