QGIS Application - Feature request #2402
Field calculator can’t fill fields with areas in units differ from layer measurements units

Description

I'm trying to create new field with field calculator and fill it with area of features. But I can't use units differ from layer units.

If set 'Enable on the fly CRS transformation' and choose Settings -> Options -> Map tools and set 'Preferred measurements units' to Meters then using Identify Features tool it is possible to get areas of features in square meters.

It will be great to realise such function in Fields Calculator.

Associated revisions

Revision ddbdcf8a - 2016-02-14 11:04 AM - Nyall Dawson
Fix project unit confusion (pt 2): add project distance unit setting

Adds a new option in project properties to set the units used for distance measurements. This setting defaults to the units set in QGIS options, but can then be overridden for specific projects.

The setting is respected for length and perimeter calculations in:
- Attribute table field update bar
- Field calculator calculations
- Identify tool derived length and perimeter values
- Default unit shown in measure dialog

Also adds unit tests to ensure that length and perimeter calculated by attribute table update bar, field calculator and identify tool are consistent wrt ellipsoidal calculations and distance units.

Revision dfdcec89 - 2016-02-15 02:47 AM - Nyall Dawson
Fix project unit confusion (pt 3): add area unit settings with a ton of available area units (eg m2, km2, mi2, ft2, yd2, ha, ac, etc)

Adds a new option in both the QGIS setting and project properties to set the units used for area measurements. Just like the distance
setting, this defaults to the units set in QGIS options, but can then be overridden for specific projects.

The setting is respected for area calculations in:
- Attribute table field update bar
- Field calculator calculations
- Identify tool derived length and perimeter values

Also adds unit tests to ensure that area calculated by attribute table update bar, field calculator and identify tool are consistent wrt ellipsoidal calculations and area units.

TODO: make measure tool respect area setting

(refs #13209, #4252 and fixes #12939, #2402, #4857)
