Category:	Build/Install			
Affected QGIS version:			**Regression?:**	No
Operating System:	Debian		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	invalid
Crashes QGIS or corrupts data:			**Copied to github as #:**	12523

Description

First I updated the sources.list with the ppa found here https://launchpad.net/~ubuntugis/+archive/ubuntugis-unstable. Then I installed qgis 1.4.0-2~karmic2 with apt-get. When I started qgis with the 'qgis' command, it seg fault.

Does someone come over this issue?

History
