

QGIS Application - Bug report #2473

identify window stays on top of other application's windows with Qt 4.6 Cocoa

2010-02-25 03:44 PM - William Kyngesburye

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: GUI	
Affected QGIS version:	Regression?: No
Operating System: OS X	Easy fix?: No
Pull Request or Patch supplied:	Resolution: invalid
Crashes QGIS or corrupts data:	Copied to github as #: 12533

Description

When I have an identify results window open, then switch to another application, the identify results window stays in front of the other application. See attached snapshot as I type this in Safari...

It doesn't happen with Qt 4.6 Carbon, so this may be a Qt bug.

History

#1 - 2010-11-30 04:55 PM - William Kyngesburye

It also affects the GRASS tools window and some other non-modal informational windows.

This is really annoying, I can't switch to another app in the system without hiding Qgis when one of these windows is open. Anyone have any ideas?

#2 - 2011-03-03 10:16 AM - William Kyngesburye

- Resolution set to invalid

- Status changed from Open to Closed

I thought I saw the same issue with Qt 4.7.0, but it seems to be solved with Qt 4.7.1.

Closing as invalid (Qt bug). Solution: use Qt 4.7.1+
