

QGIS Application - Bug report #2524

actions: problem when a column is named as the first part of another column name

2010-03-07 10:52 AM - Giovanni Manghi

| | |
|---|-------------------------------------|
| Status: Closed | |
| Priority: Low | |
| Assignee: Tim Sutton | |
| Category: C++ Plugins | |
| Affected QGIS version: | Regression?: No |
| Operating System: All | Easy fix?: No |
| Pull Request or Patch supplied: | Resolution: worksforme |
| Crashes QGIS or corrupts data: | Copied to github as #: 12584 |
| Description | |
| <p>Imagine to have a vector and in its table of attributes you have a column called <code>"*colu"</code> and another called <code>"*coluna"</code>.</p> <p>Then set an action that will need to use the "coluna" field as variable.</p> <p>In the action command at some point you will then have "%coluna" as the variable part.</p> <p>But when you will run the action the variable part will be interpreted as <code>"*%colu"</code> plus the letters <code>"na"</code></p> <p>I can't find any workaround to this.</p> | |

History

Replying to [comment:1 jef]:

ok thanks. Is this documented?

#4 - 2010-03-08 12:29 AM - Otto Dassau

yes, it is documented in the user manual.

Replying to [comment:4 dassau]:
