

QGIS Application - Bug report #2528

Jumping items in legend

2010-03-07 11:56 AM - Giovanni Manghi

Status:	Closed	
Priority:	Low	
Assignee:	Giuseppe Sucameli	
Category:	Map Legend	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 12588
Description		
<p>Well, it is pretty odd that there is no ticket about this issue. It has been around for a while and it affects both linux and windows installations, especially the latter.</p> <p>I have seen on basically every box where I have installed qgis or where I have seen qgis installed by others.</p> <p>It is enough to add a few layers to a project and then start a normal work that includes moving layers in the legend, adding removing layers and activating/deactivating layers in the legend.</p> <p>Sooner or layer you will see items jumping from their spot in the legend to another one.</p> <p>The worst part is that do not seems to exist a pattern to try understand why/when this happens.</p> <p>New users are pretty puzzled by this issue.</p>

Can anybody tries if now legend works as expected? So I can close also this ticket.

#5 - 2010-06-11 11:16 AM - Giovanni Manghi

Giuseppe, a quick test and I cannot see jumps... let assume this is fixed. I'll reopen of necessary.

#6 - 2010-06-22 03:43 AM - Giuseppe Sucameli

- *Resolution set to fixed*
- *Status changed from Open to Closed*

I see no jumps too.
