<b>Category:</b> GRASS	
<b>Affected QGIS version:</b>	<b>Regression?:</b> No
<b>Operating System:</b> Debian	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b> invalid
<b>Crashes QGIS or corrupts data:</b>	<b>Copied to github as #:</b> 10313

### Description

Trying to open existing GRASS mapset results in QGIS crash.

Steps to reproduce:

1 Start qgis ;)

2 Select Plugins->GRASS->Open mapset

Result:

```
[[QgsGrassPlugin]]::openMapset()
[[QgsGrassSelect]]() type = 0
qgis: symbol lookup error: /usr/local/lib/qgis/grassplugin.so: undefined symbol: _ZN8QgsGrass8isMapsetE7QString
```

OS: Kubuntu, gcc version 4.0.3

QGIS: from SVN trunk (revision 5742)

GRASS: current 6.3cvs

GDAL/OGR: 1.3.1

### History

#1 - 2006-08-31 02:31 AM - anonymous -

I fixed problem with 'rm -r ~/.config/QuantumGIS/'

I leave it open, as there still should be no segfault due old config file lying around. And - yes - I was lame enough not to create backup for old config file before rm'ing it :(

#2 - 2006-11-09 06:02 AM - anonymous -

- Resolution set to invalid

- Status changed from Open to Closed

IMO it has nothing to do with config files because the error 'undefined symbol'

means that the method is not available in a library. That means the application was not compiled/installed correctly. Most probably the plugin was recompiled with new version of libqgisgrass.so from provider lib, but that library was not installed.
