QGIS Application - Bug report #2571 Path to GRASS vector map loses "vector/" in path string

2010-03-21 04:26 AM - Markus Neteler

Status: Closed Priority: Low

Assignee: Lorenzo Masini

Category: GRASS

Affected QGIS version:

Operating System: All

Pull Request or Patch supplied:

Crashes QGIS or corrupts data:

Regression?: No

Easy fix?: No

Resolution: invalid

Copied to github as #: 12631

Description

To access Quantum GIS environment from this console use ggis.utils.iface object (instance of [[QgisInterface]] class).

>>> iface=qgis.utils.iface

>>> map=iface.mapCanvas()

>>> print map.layer(0).source()

/home/neteler/grassdata/patUTM32/mymapset/box/1_polygon

>>>

the correct path to a GRASS vector layer would be including "vector/" in the string:

/home/neteler/grassdata/patUTM32/mymapset/vector/box/1 polygon

Note: for raster layers it is ok:

>>> print map.layer(1).source()

/home/neteler/grassdata/patUTM32/neteler/cellhd/elevation

The omission of "vector/" in the string leads to troubles in ogr2ogr called by QGIS plugins.

History

#1 - 2010-03-25 12:07 AM - Redmine Admin

- Resolution set to invalid
- Status changed from Open to Closed

layer.source() is internal data provider representation of data location. For GRASS vector provider it is GISBASE/LOCATION/MAPSET/MAP/LAYER_TYPE.

Expecting that layer.source should be a valid OGR DSN is just misunderstanding.

Warning: please don't try to change that format, it would break all old project files.
