Description

The GUI for several GRASS modules is wrong: in the qgm file instead of option is chosen, therefore a browse button appears, which has no meaning in this context.

Examples of affected modules are: r.patch, v.patch, r.series, g.region.multiple.raster, g.region.multiple.vector

This is due to the apparent impossibility to concatenate more than one layer in commands. Adding support to this would possibly solve also the v.to.db problem with multiple concatenated columns. See also #1627
