

QGIS Application - Bug report #2636

Connection to CSV layer cannot be restored if CSV is moved

2010-04-08 07:49 AM - Maxim Dubinin

Status:	Closed	
Priority:	Low	
Assignee:	gjm -	
Category:	Data Provider	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 12696
Description		
1. Create project		
2. Create a layer from csv		
3. Save project		
4. Close QGIS		
5. Move csv somewhere else		
6. Open saved project		
7. When asked to find a layer, try to choose CSV from where it was moved		

History

#1 - 2010-07-19 12:21 PM - gjm -

Works for me when I open csv layer through the open vector method. It doesn't work when I open a csv file using the delimited text plugin. Which method was causing the problem for you?

#2 - 2011-03-05 03:12 AM - Paolo Cavallini

Could you please check if it is still true, otherwise closing it? Thanks.

#3 - 2011-03-05 09:09 AM - Alexander Bruy

This is true when point layer created with Delimited Text plugin. When CSV opened as geometryless layer with Open Vector all works.

#4 - 2011-04-16 05:04 AM - Anne Ghisla

- Resolution set to fixed

- Status changed from Open to Closed

With commit:880088c1 (SVN r15704) (and probably older revisions, but I didn't test), moving the CSV file raises a "Handle bad layers" dialog, and allows to find the files created both by Delimited Text and Open Vector.
