

QGIS Application - Bug report #2706

QGIS crashes after opening a spatialite layer

2010-05-12 07:47 AM - Horst Düster

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Data Provider	
Affected QGIS version:		Regression?: No
Operating System:	RedHat	Easy fix?: No
Pull Request or Patch supplied:		Resolution: worksforme
Crashes QGIS or corrupts data:		Copied to github as #: 12766
Description		
<p>The load of a spatialite layer leads to crash QGIS:</p> <ol style="list-style-type: none">1. Connect to a spatialite DB: all Layers of the DB are shown up2. Select one layer and click "add"3. QGIS crashes <p>I've attached the gdb backtrace output.</p>		

History

#1 - 2010-05-12 02:11 PM - Jürgen Fischer

not reproducible here.

Is your qgis built with WITH_INTERNAL_SPATIALITE?

The backtrace suggests that you Qt is built with static sqlite3:

```
#3906 0x0018a055 in openDatabase (zFilename=0x93c06e0 "/home_nas/sogis/barpadue/temp/osm_liechtenstein.sqlite", ppDb=0xbfffc75c, flags=2, zVfs=0x0) at ../3rdparty/sqlite/sqlite3.c:61350
```

Perhaps that interferes with the internal spatialite (that includes sqlite3) or dynamically linked spatialite/sqlite3.

#2 - 2010-05-18 01:51 AM - Giovanni Manghi

not reproducible here too, using qgis trunk under both ubuntu linux and windows 7.

#3 - 2010-05-25 11:04 AM - Alex Mandel

If we can verify it, then it's likely high priority to fix. User feedback required.

#4 - 2010-06-05 06:50 AM - Paolo Cavallini

Not confirmed here.

#5 - 2010-06-05 06:55 AM - Giovanni Manghi

- Resolution set to worksforme
- Status changed from Open to Closed

closing for lack of feedback, reopen if necessary.
