Description

After digitizing a line or polygon feature the digitizing of one feature is finished with a right-click.

Unfortunately, the context menu with the toolbar choice appears after this right-click when it should not. This is a major annoyance and interrupts an otherwise smooth digitizing process.

Somehow the event of the right click shouldn't be forwarded to the underlying window that trigger the context-menu display - at least during the digitizing process.

This should be fixed before a 1.5 release. Thank you!

That's Windows only, isn't it?

#2 - 2010-05-26 11:47 AM - Andreas Neumann

you may be right - problem doesn't appear on OSX. Still have to test Linux after rebooting.
