<b>Easy fix?:</b>	No	<b>Copied to github as #:</b> 12836
<b>Description</b>  - Saving file in a specified format does not append the file extensions. This was observed in the Map/Print Composer. Although a pdf filetype was activated, we had to create a complete filename with the extension (i.e "map.pdf" and not "map") in order to save the file with the extension.  I attach the modified .ccp that fixes the problem for pdf and svg file type. Im not familiar creating diff files, so please excuse me :(		

History

#1 - 2010-06-02 07:12 AM - Marco Hugentobler

- Resolution set to fixed
- Status changed from Open to Closed

Please attach a diff next time. You can generate it like this:  
svn diff &> mydifffile.diff

Then attach diff file to the ticket.

Your changes are applied in commit:0686e230 (SVN r13629) (with modification to also test for the dot). Thanks!
