

QGIS Application - Bug report #2817

Save as Image using gif only writes world file

2010-06-17 12:23 PM - Richard Duivenvoorde

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: Map Canvas	
Affected QGIS version:	Regression?: No
Operating System: All	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 12877
Description	
<p>Trying to write current mapcanvas as an image of type GIF (using menu 'File/Save as Image') will write a foo.gifw world-file, but not the corresponding foo.gif.</p> <p>Tested on trunkversion on both Windows (osgeo4w dev build) and on Ubuntu 10.04 (r13741).</p> <p>I also tried to use the <code>[[MapCanvas]].saveAsImage-python</code> to write a gif-file, and that also resulted in only the worldfile.</p>

- Resolution set to fixed
- Status changed from Open to Closed

Looks like Qt does only support reading GIFs, but not writing GIFs, but QGIS assumed that it could also write what it reads. Fixed in commit:6878a84d (SVN r13747).
